

HOW COULD I KNOW IF A LG SYSTEM CAN BE CONTROLLED WITH ZENNIO GATEWAYS?

1. Identify the model of **indoor units** in the LG system.

2. You should extract the characters corresponding to the model of indoor unit. Below you can see some examples of indoor units and the characters that correspond to the model:

	Model	Outdoor unit	Indoor unit	Table model
Residential	AM09BP.NSJ	AM09BP.UA3	AM09BP.NSJ	→ AM-BP
Commercial	CB12L.N22	UU12W.ULD	CB12L.N22	→ CB-
Multi V			ARNU24GTPC4	→ ARNU-GTPC4

3. The following 3 **conditions** must be met in your model to be **compatible** with KLIC-LG1:

- a. The model is **included** in this table.
- b. The model was **manufactured** after **January 1st, 2019**.
- c. The **remote control** that commands your model is listed in [Annex I](#).

If any of the above 3 conditions are not met, please, consult with **Zennio Technical Support** <http://support.zennio.com>
